“For Immediate Release”

Spring Dandelion Control Program Set To Resume

The City of Prince Albert’s dandelion control program will soon be underway. In the next few weeks, the dandelion germination will be visible in locations throughout the City. The Community Services Department is assessing these areas for the correct timing of controlling the new germination.

City crews have prioritized areas to target this spring including sports fields, boulevards, easements and medians.

In the spring the plant is actively growing and the dandelion is vigorous and healthy at this time. The City uses Killex 500 to control dandelions which specifically targets broadleaf weeds. Once the chemical is applied to the broadleaf weed, the plant eventually becomes weak and dies.
